

UPLIFT DESK®

L-SHAPE DESKTOP COLOR

certified for low chemical emissions
UL.COM/GG - UL2818

Choose from a variety of high quality laminate desktops. All of our desktops are GREENGUARD-Certified for health and safety for indoor use, so you don't need to worry about chemical emissions such as the formaldehyde found in lower quality materials. GREENGUARD-Certification is your assurance that our products are sustainable and safe.

Laminate

Our laminates are available in three colors, and are 1" thick, made of 45-lb density recycled paper and wood, and feature a 3 mm PVC edge to prevent peeling.

If you prefer a laminate top in a different color than the above, we can make a custom top in your choice of hundreds of colors or patterns, in just about any size or shape you can imagine. Contact us if you'd like to go over your custom options.

Bamboo

Also available as beautiful premium bamboo tops. All tops are a full inch thick, compared to the industry standard 3/4" thickness, giving you a sturdier desk with less chance of desktop deflection, as well as a more attractive edge profile. Choose from rectangular or center cut.

Clean and Environmentally-Friendly

Not only are UPLIFT bamboo desktops made from one of the most renewable and sustainable materials on earth, they are produced with non-toxic, formaldehyde-free glues and finishes that meet or exceed EPA standards. Tops are UV-cured using a clean, energy-efficient process with no VOC's or air pollutants, recognized by the EPA as a "Best Available Control Technology" under the Clean Air Act.
