

Evoluent® Reduced Reach Right-Hand Keyboard

Mouse not included

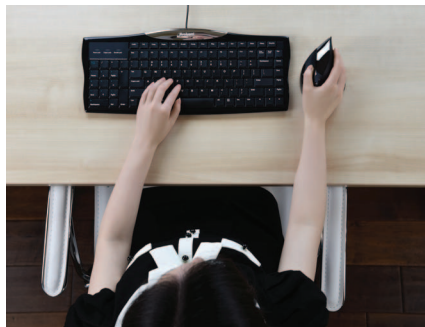

Conventional keyboard has navigation keys and number pad on the right side.

You must extend your arm to reach the mouse, causing arm and shoulder strain.

Evoluent's Reduced Reach Right-Hand Keyboard has a number pad on the left side to make space for the mouse.

Evoluent's keyboard significantly reduces the reach to your right-hand mouse for a more relaxed arm position.

The number pad is on the left side and the navigation keys are duplicated on both sides. Operate the left keys with your left hand to keep your right hand on the mouse. This unique arrangement reduces reaching for the keyboard with your right hand when you use the mouse.

Dedicated shortcut keys for one-touch access to frequently used functions without using any Fn key.
