

In conjunction with The Human Solution, Kinesis Corporation is offering a free trial sample of the Freestyle2 adjustable split ergonomic keyboard (Limit of one keyboard and qualifying accessories per organization/consultant).

There are two simple eligibility requirements:

- You are the lead of your enterprise’s active office ergonomic program with 100+ employees or you are a consultant conducting worksite assessments
- Participate in a Virtual Product Training Webinar to determine which item(s) would be appropriate for your program (and have not previously participated in the webinar)

The Kinesis® **Freestyle2** keyboard provides **complete** separation to accommodate a wide range of body types, allowing users to personalize adjustments to their specific needs while minimizing mouse reach and awkward postures.

Unique optional accessories (Freestyle2 VIP3™ and Freestyle V3™) enhance comfort by “tenting” the keyboard to reduce forearm tension. An optional keypad is also available for heavy number crunchers.

The Freestyle2's various configurations allow the user to choose features including complete separation, adjustable front splay and adjustable tenting, with or without integrated padded palm supports.
