

Many people find that when they raise their desk to a standing height, they also need to adjust the height of their monitors. You may find this to be the case depending on your body proportions. If you have long legs, you will probably need to adjust your screen height as you go from sitting to standing and vice versa. For best ergonomic comfort and health, the top of your screen should be positioned just below eye level and about an arm's length away.

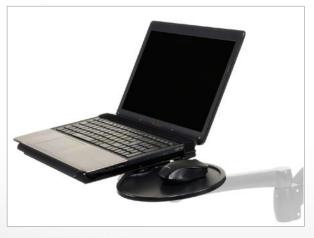

UPLIFT Monitor Arms are designed in-house by our Certified Professional Ergonomist. They feature an impressive 27.5" of depth adjustment and 360° display rotation range. The pneumatic gas cylinder is fingertip-adjustable, providing consistent resistance to allow your monitor to float above the desk at optimal ergonomic viewing height. Integrated cable management keeps your workspace organized and clutter-free.

We offer two different models to accommodate monitors of varying weights:

S: For monitors weighing between 4.5 - 17.5 pounds each

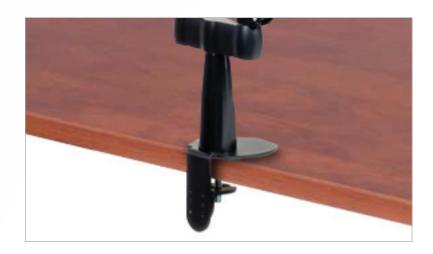

H: For monitors weighing between 17.5 - 35 pounds each

Please note: You must choose the model that corresponds to the weight of your monitor. The arm will not counterbalance correctly if the monitor is outside the specified weight range. Please check the weight of your monitor before ordering, or contact us for assistance.

You can also choose to add a laptop mount to your monitor arm in order to raise your laptop screen to comfortable viewing height. The laptop attachment mounts directly to the VESA plate and provides the same extended adjustment range. It is compatible with laptops weighing up to 30 pounds, and includes a lip at the edge of the platform, non-slip pads, and elastic straps for extra security. A swiveling circle platform provides space for small items or mouse storage (not recommended as a mouse pad).

UPLIFT DESK® MONITOR ARM

Monitor arms mount securely to the back of the desk with a clamp, suitable for desktops up to 3 5/8" thick.

Features - UPLIFT Single & Dual Monitor Arms

- Support a wide variety of monitor weights
- Allows you to easily adjust the height, depth and tilt of your monitor(s)
- 360° rotation allows for exceptional mobility
- In-line wire management minimizes cable clutter

| Height adjustment range | 19" H |
|-------------------------|---|
