Introducing the most advanced height adjustable standing frame: the UPLIFT V2 Standing Desk Frame. We've taken our most popular desk frame and increased its safety, improved its stability, and added multiple features.

UPLIFT V2 Commercial

We created the UPLIFT V2 Commercial Standing Desk Frame to provide a seated and standing height range that's ergonomically suitable for 95% of office workers. This frame meets the ANSI/BIFMA G1-2013 height standard required by many of the worlds largest companies, which accommodates users from 5' tall seated to 6'3" tall standing.

355-lb Lifting Capacity

Enough lifting power to handle even the larger desk setups

Contract-grade Quality

Designed for commercial-level use and constructed from highly durable materials

We tightened the tolerance between the three telescoping stages of the legs for a more precise fit

3-stage Legs

Our legs are 33% faster and have a 33% greater height range than competitors' 2-stage frames

Dual Motor Design

Stronger, more reliable, & quieter

Whisper-quiet

Adjusts quietly at a peaceful 50 dB

Superior Anti-collision Sensitivity

Superior anti-collision technology quickly detects light resistance if objects or people are in the desk's path, and reverses the frame's direction to help prevent accidents or injuries

48 Accessory **Mounting Points**

These functional additions allow you to connect new and upcoming desk-enhancing accessories to your UPLIFT frame. The 48 mounting points are patent pending and unique to **UPLIFT Desk**

|←>| 41.3"-72.2" Width Adiustment

Frame expands to fit our 42"-80" desktop sizes

Available in 4 Color **Options**

Color options include black, white, gray, & metallic (industrial style)

Included Under-desk Wire Management

Meets BIFMA X5.5-2014 Durability Standard¹

Differences

UPLIFT V2

UPLIFT V2 Commercial

25.5"-51.1" Height Range

This range includes a 1" desktop. The total travel distance is 25.6"

22.6"-48.7" Height Range

This range includes a 1" desktop, meeting BIFMA height requirement. Total travel distance is 26.1"

Stability Brace

Steel reinforcements are tucked under the desktop and eliminate side-to-side wobble. Stability braces remove the need for a lower crossbar. leave more room for accessories, and create a clean, streamlined look

□ Stability Crossbar

We included a stability crossbar to support this lower-height-range frame, which lets you work at higher heights without your desk wobbling

Inverted Leg Orientation

Inverted leg orientation allows us to weld stability braces to both sides. This gives your desk optimal stability without the need for a stability crossbar

Thicker Legs

These legs have a 35% larger cross-sectional area to improve stability (90 mm x 60 mm vs 80 mm x 50 mm)

For a more in-depth look at the similiarties and differences between the frames, watch our video!

BIFMA Meets ANSI/BIFMA G1-2013 Height Standard²

^{2.} Ideal for office spaces that choose ANSI/BIFMA G1-2013 compliance, the BIFMA height standard accommodates the widest range of potential employees, adjusts 2" lower than standard frames, and is a solution for users who are very petite or very tall (within a 5' to 6'3" height range).

UPLIFT V2

Introducing the UPLIFT V2

We've taken our most popular desk frame and improved its stability, increased its safety, and added a number of innovative features. Engineered for quick, reliable height adjustment, the reinforced UPLIFT V2 Frame includes two separate motors and an inverted leg design, which keeps the desk sturdy at its highest height. Attach accessories quickly using the frame's patent-pending mounting point system. And choose between white, gray, black, and metallic (industrial style) finishes for the perfect look.
