Gesture seating
Gesture™ is the first office chair designed to support a greater range of technologies, postures and user sizes.

Inspired by the human body, designed for the way we work today.
Global Posture Study

To better understand the body at work, Steelcase conducted a global posture study spanning six continents and more than 2,000 participants. We discovered that changes in technology and behavior have led to new unhealthy postures that are not adequately supported by current seating solutions. While technology boosts productivity, it can cause discomfort that disrupts our work, our ability to concentrate and our creativity.
Greater Range of Technologies

The Gesture 360 arm moves like the human arm, while supporting users in any position. Most people use an average of three devices a day, and Gesture supports movement and healthy postures between devices when interacting with technology.

SUPPORTING HEALTHY MOVEMENT

Gesture allows healthy movement and postures like reclining without pulling users away from their work.

SUPPORTING MOBILE TECHNOLOGY

Gesture’s supportive design helps prevent tech neck—an increasing health issue in the workplace. Highly adjustable arms enable users to bring small mobile devices in close and up to eye level, avoiding awkward and unhealthy postures.
Greater Range of Postures

With 3D LiveBack, Gesture automatically adjusts to mimic natural spine movement, contouring to the user’s back in all postures. It is designed as a system of synchronized interfaces, supporting a greater range of postures through the back, the seat and the arms.

The placement of the arms toward the back of the chair and the soft seat edges allow for comfortable alternative postures.

SUPPORTING THE LOWER BACK
Gesture conforms to a user’s back, preventing unhealthy postures that result from a lower back gap.
Greater Range of User Sizes

Gesture solves for the broadest range of user sizes with an extended tension range, arm width, and a wider-than-average seat featuring adaptive bolstering to fit a user’s unique size. Regardless of body type, Gesture promises personalized comfort in one simple solution, all in a smaller footprint.

33%

Gesture uses 33% less space, on average, than other task chairs, helping organizations maximize their real estate.

EASILY DISCOVERABLE. IMMEDIATE FEEDBACK.

Two intuitive, easy-to-operate controls respond immediately to the user’s adjustments. The front knob controls seat height and depth, while the back knob controls tension and variable back stop.
Greater Range of Choice

Gesture provides a variety of options, from surface materials to fixed arm and stool height, allowing customized comfort and aesthetics.
SUSTAINABILITY

At its heart, sustainability at Steelcase is about people. It’s about creating and supporting the economic, environmental and social conditions that allow people and communities to reach their full potential.

Research and insights direct our path. It’s not only about creating goods; it’s about creating good. It’s not only about creating value; it’s about living our values. It’s not just about reducing our footprint; it’s about expanding our reach. It’s about creating lasting and meaningful change to enable the long-term wellbeing of current and future generations.

Innovative products and solutions result. In the development of our products, we work to consider each stage of the life cycle: from materials extraction, production, transport, use and reuse, until the end of its life. We demonstrate performance through third-party verified certifications and voluntary product declarations.

Steelcase’s sustainability promises, actions, and results are communicated in an annual Corporate Sustainability Report.
